

Alpha Touch Screen

Ideal solution for public libraries, universities, hospitals, law offices, government facilities....

*Control access and
integrate your operation*

Copy and print Control

The Alpha Touch screen works with leading market software products to control copier, printer, fax and microfilm output in offices, schools and library environments. The Alpha plugs into a network hub or switch to communicate with your central accounts database which tracks activity at all your office machines.

Patrons key their account number in to the Alpha or swipe virtually any ABA magnetic stripe card (student ID, library card, grocery store card, even proximity card). This enables the copier or other device and charges the job to the patron's account.

Benefits

Secure

Patrons are guaranteed secure access to unattended devices.

Networked Solution

The Alpha lets you eliminate proprietary debit cards and migrate to an online account-based system that automatically tracks activity at all printers and copiers in a single database.

Printing

Users can pick up their print jobs wherever they choose – in a different building, after class, on their way home. They simply identify themselves at the printer with their account number and once verified the Alpha displays a list of their jobs. The printing follows the user.

Key Features

Robust

The sturdy ABS case is ideal for public use.

Flexible

The Alpha works with all leading print vending software products on the market today.

Convenient

One low-cost device controls copy and print output on most traditional and multi-function copiers. Color, Black & White and different media sizes can all be controlled with the VCC.

Interfaces/ Options

- ABA Track 2 Card Swipe, Prox by HID or optional Mifare proximity card reader.
- Barcode scanner option.
- Debug mode allows screen contrast adjustment.
- 16 character keypad and full Keyboard layout option for user name and password entry
- Dual port 10/100 base T Ethernet connection.
- Copier interface attaches to all major brands of copiers.
- Case prevents access to cables in the back of the unit.
- DHCP/DNS or Static IP network configuration.
- One low cost device allows tracking of Color copies, large paper sizes and duplexing.
- Allows for billing to departments, users, job codes etc.
