

Virtual Cash Acceptor

Add Value Station

The **Virtual Cash Acceptor** plugs into a standard network hub or switch to communicate with your central accounts database. This self-service device lets users add money to their accounts or even create new accounts at any time. Users access their accounts via the keypad, card reader or barcode scanner, and then add funds via a standard bill acceptor (or optional coin acceptor). The system accepts virtually any ABA magnetic stripe card (student ID cards, credit cards or even magnetic stripe cards from the grocery store). To create a new account, the user inserts or scans a card (or keys in an account number), follows the screen prompts to create a secure PIN using the keypad, then inserts cash.

Key Features

Security

Optional Abloy® high-security locking system prevents theft and tampering. Machine cannot be locked with the keys inside. Its high-quality currency acceptor and vandal-proof keypad make it perfect for unattended use.

Flexibility

Provides three avenues of access: Keypad for entering account numbers and responding to prompts, card swipe and barcode scanner.

Audit Trail

Unique transaction receipt provides proof of deposit and guarantees security of funds.

Simple

High-quality vacuum fluorescent display provides clear instructions for user operation.

Key Features

The Virtual Cash Acceptor is an extension of our networking product line, which allows patrons to charge printing and copying costs to their online accounts. Activity at all copiers and printers at a single site can be controlled from a centralized database, managed by networking software available from several popular print vending software companies. The system limits access to users with valid accounts by prompting them to swipe or scan an ID card or enter an account number at the keypad. When the account is verified, the print out or copies are released and the account information is then updated.

Interfaces/Options

Card Reader

Standard ABA Track 2, Prox by HID or Mifare proximity card* - the contactless smart card of choice

Barcode Scanner*

For use with library cards and other barcoded ID

Printer

Fast thermal receipt printer minimizes transaction time and increases productivity
